

UVAToday Monthly Communications Summary

UNIVERSITY COMMUNICATIONS

July 2023

Report Highlights

335K cumulative pageviews have been achieved FYTD. This **exceeds** pageviews for 2023 for the same period (July).

Say Goodbye to the 'Kings' was the most viewed story in July, followed by **Gov. Youngkin's BOV appointments**, **UVA Athletics Mount Rushmore**, and **President Ryan and Provost Baucom's response to the Affirmative Action decision**.

The **July 25th DR** had the highest **CTR** for the month (5.9%). Top stories for July 25th were **Professor's Wife Lives on in Memorial Window (39.9%)** and **Inflammation Discovery (32.6%)**.

The DR click rate and pageviews for July decreased slightly over the previous month. This could be attributed to a decline in readership and engagement during the summer. Pages per session and time on page remained stable compared to June.

The June edition of UVA This Month (sent on 7/15) achieved the second-highest CTR (5.5%) across all UVA This Month sends for FY23.

In July, **owned ads** drove an additional **17,849 clicks to external partners or content** (Fanatics, YouTube, etc.). Of these, 12,242 were on Red, White, and Hoo ads, 4,019 went to Final Exercises videos on YouTube, and 1,588 were on Women's Soccer Jersey ads. For comparison, the total number of clicks to external partners in June was 17,425, representing an 2.4% month-to-month increase.

Note: this report does not contain data for Research Digest.

Notes on Google Analytics 4 (GA4)

This report uses data from Google Analytics 4 (GA4), the next generation of Google's web analytics service. GA4 officially launched on July 1, 2023. The preceding generation, Universal Analytics, will be gradually phased out and retired on July 1, 2024.

While this report maintains the same order and look as past monthly reports, the data sources are completely new and contain some notable differences over those connected to Universal Analytics. This can complicate historical comparisons between data from GA4 and Universal Analytics.

One of the key differences between GA4 and Universal Analytics is pageviews. Pageviews in Universal Analytics were connected primarily to the exact URL for a page. GA4, however, collects data from a higher level and thus can pull pageviews and other information even in instances when a URL is altered or truncated. URLs are frequently altered when distributed via social media, email, and other platforms. This inhibited data collection via Universal Analytics, but has less of an impact in GA4. This change, however, means that stats such as pageviews sometimes appear inflated in data sourced from GA4 compared to Universal Analytics.

Attached with this report is a briefing that explores and compares the department's primary data collection and reporting platforms: Universal Analytics, GA4, and Parsely.
