---

# EXECUTIVE SUMMARY

July 2020 was an important month for University Communications as the Return to Grounds plans and updates continued to evolve. This month brought a new weekly newsletter for the UVA community to provide the latest information and updates regarding the fall semester.

July continued to see strong year over year pageviews, up 36% from July 2019. Of the top 10 stories in July, about half were research focus stories, particularly related to COVID-19. Readers seem to be engaging with “positive” COVID-19 stories related to research that is moving us forward, likely seeing them as a reprieve from much of the negative stories flooding the news today. Other top stories this month primarily consisted of operational University announcements regarding the return to Grounds in the fall.

**Suggested action:** continue to look for opportunities to publish stories that highlight the great work that UVA is doing related to COVID-19 research. There may also be opportunity to find some lighter “feel good” stories to give readers some positive stories to engage with in the midst of a pandemic.

Last month, it was suggested to scale up social media presence on LinkedIn, given that this platform has the most followers of all social accounts. In July, we increased the number of posts on LinkedIn by 80%. Our total reach on the platform increased by 20%. While total reach increased in July, our avg. reach and engagement rate per post declined. This is likely a result of posting a broader collection of stories to the platform. In the past, posts on LinkedIn were limited to major announcements or extremely specific/relevant stories, which are likely to have high engagement rates. As we expand the content on this platform, it can be expected that engagement and reach may be lower, at least at the beginning.

**Suggested action:** be consistent in continuing to post relevant content on LinkedIn. Social media algorithms tend to favor consistency and frequency in posts, and will be able to “learn” more about audience behavior each time content is shared.

When looking at year to date trends in social media reach and engagement rate, June and July saw decreased performance compared to prior months. This is likely partially explained by the fact that earlier months saw extreme outliers in content, for example, the Virtual Celebration and Dave Matthews video in May, along with the onset of COVID-19 and the initial operational changes made in March and April. Additionally, as we approach the fall of an election year, it becomes more challenging to reach users in their news feeds, as there is extreme competition with political advertisements and an increasingly active news cycle. As Facebook becomes increasingly pay-for-play, fewer users see organic content in their feeds.

**Suggested action:** understand that we are likely to see decreased reach over the next few months as a result of the current climate, and that it does not necessarily reflect the quality or effectiveness of our social media strategy. There are mitigation tactics to explore, such as identifying ways to improve engagement rates which often results in increased reach.

The Fall 2020 resource sites (Student and Institutional) were released on June 17, and have earned nearly 400,000 pageviews since launched. In July, the Return to Grounds email updates began being distributed every Thursday afternoon. This has allowed the UVA community to easily access the latest updates and information about returning to Grounds. Open Rates on the email updates have been over 50%, well above the July Daily Report average of 35%.

**Suggested action:** the Return to Grounds email updates are an effective way of distributing information to the UVA community. With an understanding that social media channels are seeing decreased reach as a result of current competition, continuing to rely on email content will be a crucial way to ensure that our audience receives necessary information moving forward.

# DAILY REPORT

# DAILY REPORT PERFORMANCE YEAR OVER YEAR

*From July 2019 to July 2020, the Daily Report Open Rate increased, while Click Through Rate decreased. This is likely driven by the addition of students to the DR distribution, who tend to open emails at a high rate, but do not click on the emails as frequently as other audience groups. In both years, Open and Click Through Rates have surpassed the Education industry average.*

\* Open rate is calculated by dividing unique opens by total delivered emails, CTR is calculated by dividing unique clicks by unique opens. Industry benchmarks reflect Education industry from Hubspot email benchmarks.

# SOCIAL MEDIA

# SOCIAL MEDIA REACH AND ENGAGEMENT RATE - YEAR TO DATE

The below graph shows year to date reach and engagement rate for Social Media content. July reach and engagement rates remained fairly consistent month over month, after reach declined significantly from May to June.

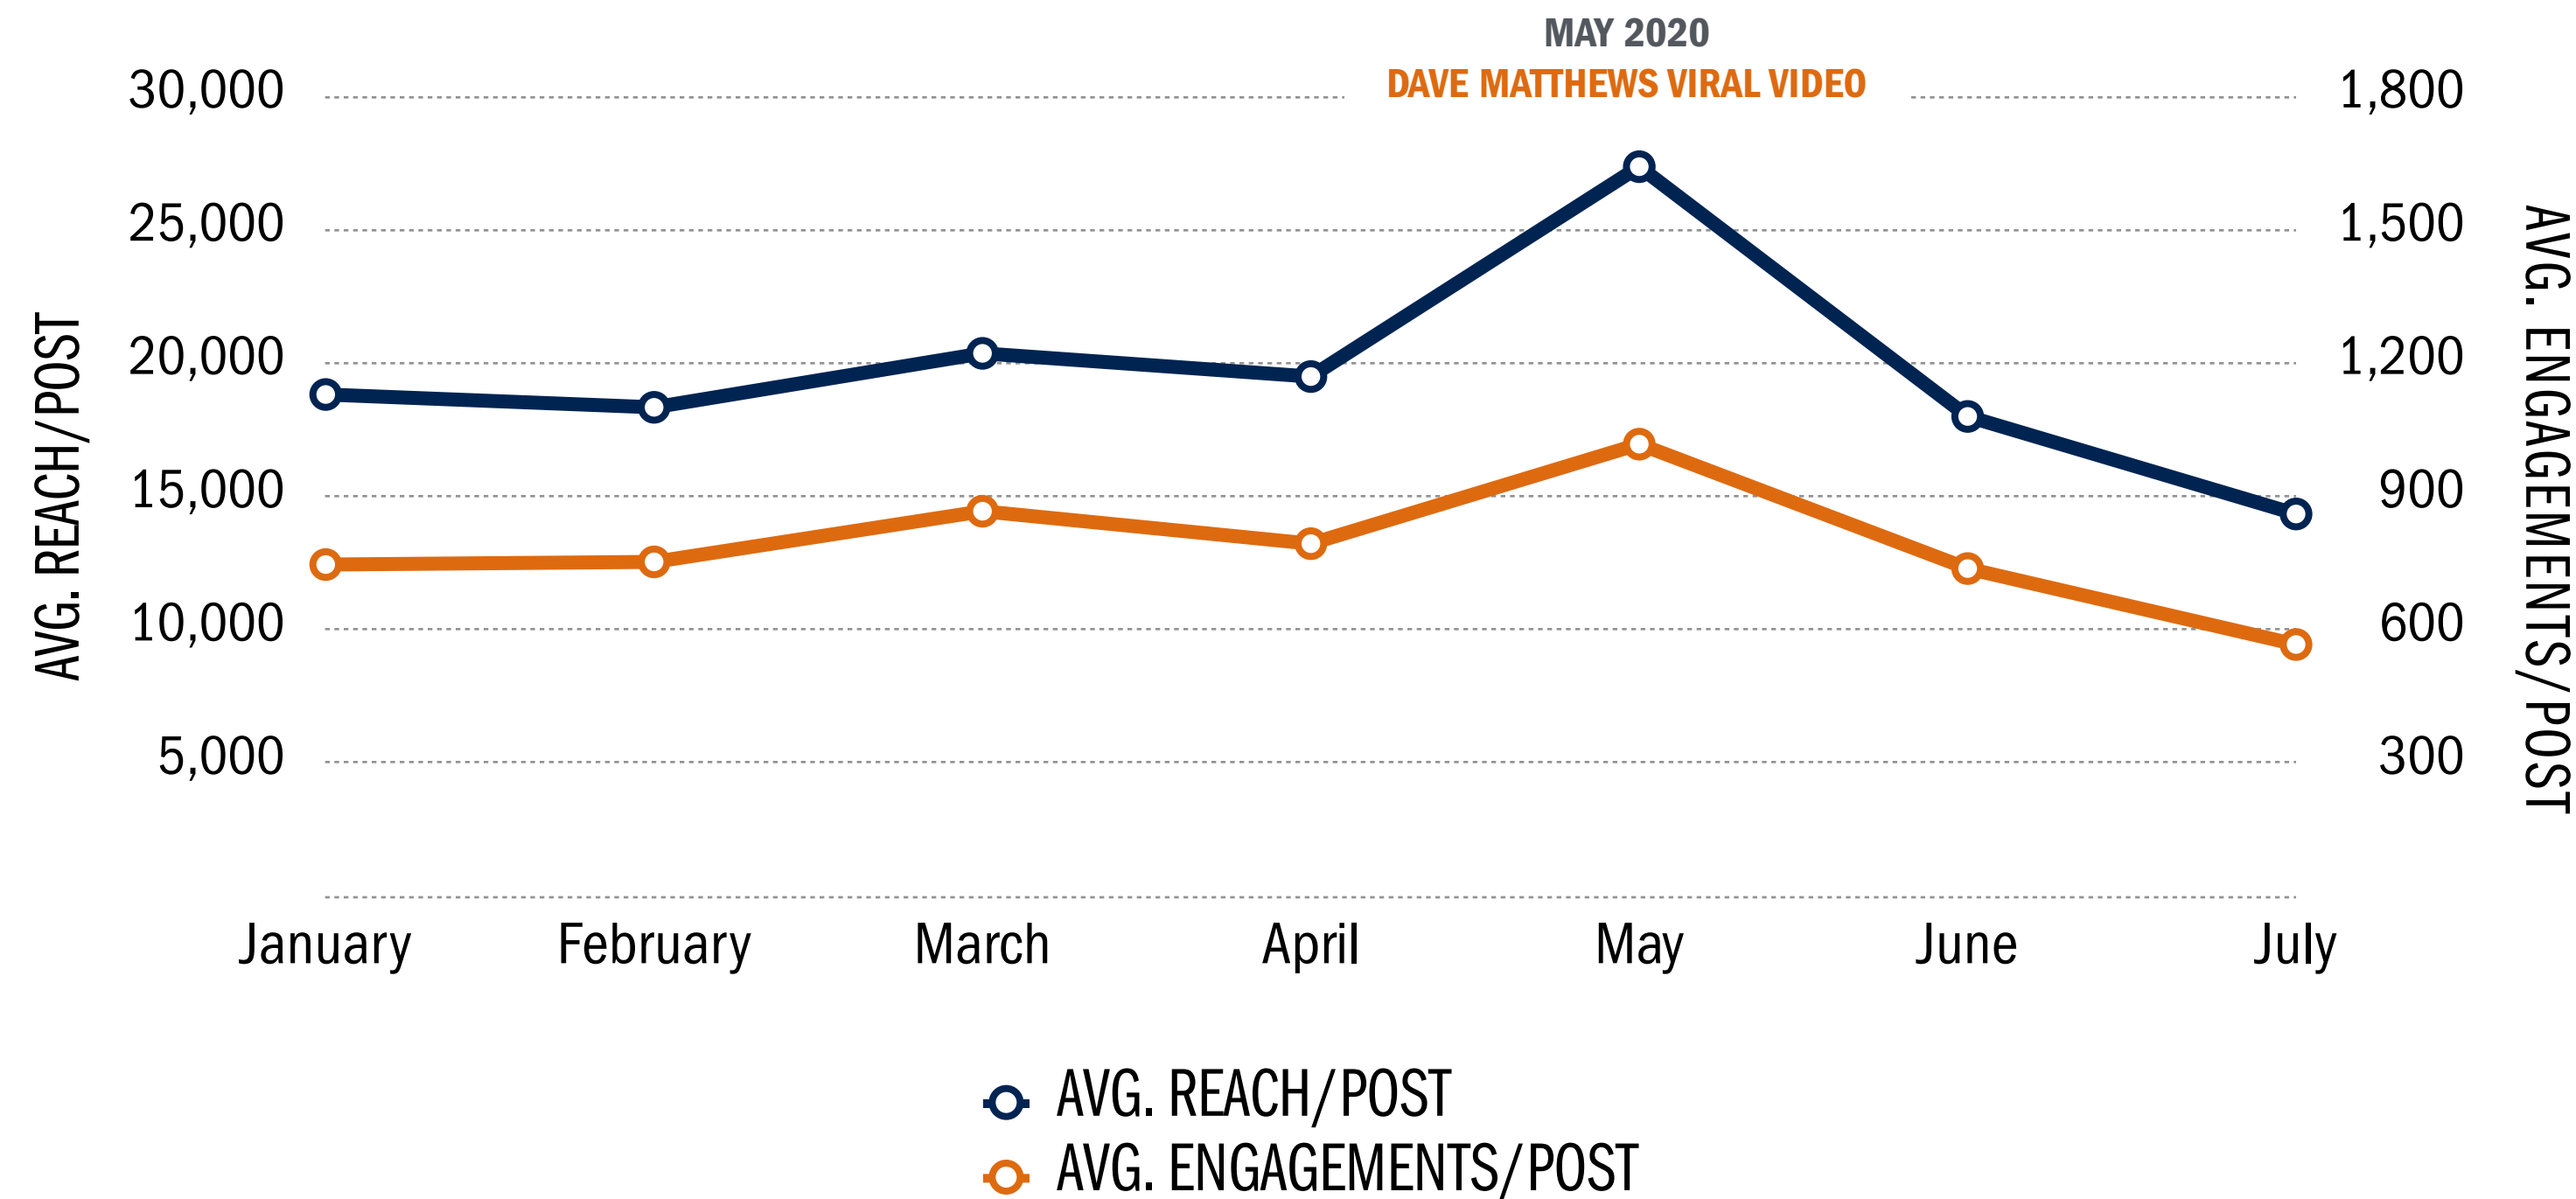

\* Includes reach for posts on Facebook, Instagram, Twitter, and LinkedIn posted during the month of June. Twitter and LinkedIn track Impressions instead of reach, so for these platforms, Impressions = Reach for measurement purposes. Does not include Instagram Stories data.

**SOURCE:** Facebook Creator Studio, Instagram Insights, Twitter Analytics, LinkedIn Analytics  
**DATE RANGE:** 1/1/20 - 7/31/20

# AVERAGE POST METRICS - YEAR TO DATE

**Looking at reach alone does not tell the full story of Social Media impact, as total reach is dependent upon the number of posts published within a month. If you post more often, reach will increase. For this reason, we also need to look at average reach per post, and average engagement per post.**

AVG. REACH AND ENGAGEMENTS PER POST CONTINUED TO DECLINE IN JULY, AFTER PEAKING IN MAY.

THIS DECLINE WAS SEEN ACROSS ALL CHANNELS (FACEBOOK, INSTAGRAM, TWITTER, LINKEDIN), INDICATING THAT THIS APPEARS TO BE A LARGER TREND IN BEHAVIOR AND NOT REFLECTIVE OF A PARTICULAR ISSUE ON ONE PLATFORM

\* Includes reach for posts on Facebook, Instagram, Twitter, and LinkedIn posted during the month of June. Twitter and LinkedIn track Impressions instead of reach, so for these platforms, Impressions = Reach for measurement purposes. Does not include Instagram Stories data.
